Yakov Polezhaev

Backend Software Engineer (.NET / C#)

polezhaev.yasha@gmail.com · Telegram @poll_ezha · github.com/pollezha · Based in Serbia · Remote or relocation in Europe

SUMMARY

Backend engineer with 2+ years of commercial experience building enterprise and microservices-based applications in C# / .NET. Designs business-critical modules, improves performance, follows DDD and Clean Architecture. Contributed to a Transportation Management System processing 1,000+ shipments per day across 25 microservices. Builds with AI agents (Claude Code) daily.

SKILLS

C# · .NET · ASP.NET Core · EF Core · PostgreSQL · SQL Server · MongoDB · Redis · RabbitMQ · Kafka · SignalR · Quartz.NET · Docker · Kubernetes · Azure · S3 · Git · GitLab CI/CD · REST API · DDD · Clean Architecture · Microservices · Grafana · Vue.js · Claude Code

EXPERIENCE

Backend Developer (.NET) — Jan 2026 – present

ProSpace (Smart-com) · Moscow / remote

TMS platform for freight (1,000+ shipments daily, 25 microservices, PostgreSQL 200+ tables).

- Built the Transport module on my own — the core service every shipment passes through (ASP.NET Core REST), implementing the transport domain logic with maintainability and extensibility in mind.
- Designed event-driven CRUD audit logging extensible without touching business logic, with minimal performance impact and lower regression risk.
- Took part in architecture of new modules, clarified specs with analysts, owned technical decisions in my scope.
- Used Grafana to diagnose services, find incident root causes and verify releases.
- Refactored legacy code, worked in a cross-functional team (backend, frontend, QA, analysts), code review, xUnit tests.

Stack: C#, .NET, ASP.NET Core, EF Core, PostgreSQL, MongoDB, Kafka, SignalR, S3, Azure, Kubernetes, Docker, Grafana, Vue.js · prospace.tech/optitrack

Backend Developer (.NET) — Jul 2024 – Dec 2025

TimePath (Траектория времени)

Enterprise platforms for energy and utilities; the largest project served 17 regions, 7M+ objects and 2,000+ users.

- Developed REST backend services on C# / ASP.NET Core; PostgreSQL and SQL Server; RabbitMQ and SignalR.
- Cut a complex filter page from 40+ s to under 2 s: found that data was filtered on the client after loading the full set; optimised SQL and moved processing to the database.
- Moved queues, file handling and shared logic into a platform core — new features ~2× faster to build, verified on three projects.
- Implemented security: endpoint protection, role-based access, configuration encryption, bulk-export limits.
- Set up a demo stand for client offers; configured GitLab CI; reviewed interns' code; wrote unit tests.

Stack: C#, ASP.NET Core, EF Core, PostgreSQL, SQL Server, RabbitMQ, SignalR, Docker, GitLab CI · timepath.ru

EDUCATION

2025 Bachelor's degree in Business Informatics — HSE University, Perm campus

COURSES

2024 Python testing course, ITFB Academy

2023 Teachers' school, Liga Robotov (robotics instructor)
